

# Materials Science in Manufacturing

Materials Science in Manufacturing focuses on materials science and materials processing primarily for engineering and technology students preparing for careers in manufacturing. The text also serves as a useful reference on materials science for the practitioner engaged in manufacturing as well as the beginning graduate student. Integrates theoretical understanding and current practices to provide a resource for students preparing for advanced study or career in industry. Also serves as a useful resource to the practitioner who works with diverse materials and processes, but is not a specialist in materials science. This book covers a wider range of materials and processes than is customary in the elementary materials science books. This book covers a wider range of materials and processes than is customary in the elementary materials science books. \*

Detailed explanations of theories, concepts, principles and practices of materials and processes of manufacturing through richly illustrated text\* Includes new topics such as nanomaterials and nanomanufacturing, not covered in most similar works\* Focuses on the interrelationship between Materials Science, Processing Science, and Manufacturing Technology
