

IEC GUIDE 113 Ed. 1.0 en:2000, Materials declaration questionnaires - Basic guidelines

One important aspect of product-related environmental protection is environmentally safe product recycling or disposal. This is possible only with the knowledge of the substances contained and the potential hazards to health and to the environment that they represent. Therefore, the manufacturer should know which environmentally relevant substances are contained in his products. Additionally, he should know the distribution and the concentrations of these substances. He should be able to give the required information to those who need it. This guideline is written to assist companies which have to develop materials declaration questionnaires for products, for instance as part of purchase specifications. It intends to increase the harmonization and the comparability of the various questionnaires. This title may contain less than 24 pages of technical content.
